business

Laboratory Incubators

Designed and Manufactured by **Thermoline**

The Thermoline Benchtop Incubator range is designed and manufactured to provide safe and precise temperature conditions for your research and samples stored inside. With a digital microprocessor controller and a temperature range from ambient +5°C to +60°C, our benchtop incubator is the economical choice for all non-critical samples requiring incubation.

- **Models available:**

Thermoline has eight laboratory incubators available, all designed and manufactured in Australia. This is the benchtop range and is made to meet your clinical environment's high standards; our benchtop incubators are innovative, easy to use and deliver consistent performance.

Thanks to the simple switch on the rear of the incubator, you can change between fan-forced and natural convection whenever you need.

The 20L to 120L models all feature an option (standard on TI-280F) for an internal clear polycarbonate door allowing the operator to open the outer door and view their samples inside without interrupting the temperature conditions.

- **Digital Controller:**

The Omron E5CC-T uses an automated programmable microprocessor to control the temperature within $\pm 0.1^{\circ}\text{C}$. The bright LED display has a range of functions including high alarm and programmable multi-setpoint functions.

- **Thermo-Wall Heating:**

Our unique Thermo-Wall heating consists of heating pads xed to the exterior of the liner that are controlled by the cabinet's Omron PID controller. This creates an environment where heat is uniformly distributed from all sides and through the oor.

- **Stainless Steel Interior:**

Stainless steel is durable, easy to clean and corrosion-resistant, making it the perfect choice for high heat tasks. 304-grade stainless steel is used here to ensure the most corrosive-resistant liner possible.

- **Fan Forced or Natural:**

Fan-forced systems use a fan to circulate warm air, while natural convection systems rely on the gentle upward movement of warm air to circulate heat. These incubators allow you the choice of either method via a switch on the rear of the incubator.

Options

BMS Plug

No volt contact closure plug and socket connection to a Building Management System

Additional Shelves

Additional Stainless Steel shelves to suit

Door Locks

Key lockable door locks

Customisable Port Hole

Add additional 13mm port holes or choose 50mm port holes

Castors

Castors can be fitted to allow for easy moving of the cabinet.
Not recommended for cabinets mounted on a bench.

**We are proudly
Australian owned**

We will continue to invest in Australian
manufacturing.
